Subject: Solar Feed In Tarif

To whom it may concern,

We installed solar around 3 years ago & at the time was quite a significant outlay, therefore should get a benefit for the avoided cost of using the transmission network as a result of solar feeding electricity into the grid close to where it is used. This benefit should be shared with solar owners

The regulated feed-in tariffs should be available for all renewable energy generation up to 100 kW (currently limited to 30 kW) to support the contribution that community and commercial solar can play in meeting our energy needs.

Regards,

Neil
